- Finding a "Keep it simple" time tracking solution
- Lack of modularity
- Good price-performance ratio

**SOLUTION:**

TimeStatement Pro

**RESULTS ACHIEVED:**

- Increased efficiency
- High acceptance
- Improved reporting and transparency
- Rapid introduction

## CUSTOMER PROFILE

SIEMENS Global Business Services Hire-to-Retire Service Line offers a variety of services from hiring to retirement, including payroll, administration, and HR reporting in 168 countries. Siemens GBS Hire-to-Retire Service Line takes care of everything, ensuring a positive employee experience. The company has 136,000 customers worldwide.

## CUSTOMER CHALLENGE

One of the main problems Siemens experienced before implementing TimeStatement was the difficulty in finding a professional tool that, on one hand, implements the "Keep it simple" philosophy and, on the other hand, meets the high requirements of a large corporation. The ideal tool needed to be easy to use and at the same time powerful enough to meet the complex requirements of a globally operating company. Existing solutions were either too complex and not modular enough, making them difficult to use and driving up costs, or they did not meet the high reliability and professionalism standards that Siemens required.

## TIMESTATEMENT'S SOLUTION

TimeStatement Pro is a modern SaaS solution for time tracking. Thanks to the ready-to-use platform, the system was quickly and efficiently implemented company-wide within a few weeks after a short test phase. The project time tracking impresses with a clear, intuitive

user interface and offers modular usage options that are perfectly tailored to the company's diverse requirements. This flexibility allows seamless integration into existing work processes, making TimeStatement Pro the ideal choice for efficient time tracking.

## BENEFITS FOR THE CUSTOMER

### Increased efficiency and rapid implementation

The implementation of the TimeStatement software went smoothly and efficiently. After a short test phase, the software could be quickly introduced throughout the company, leading to rapid adaptation and integration into existing workflows.

### High acceptance due to user-friendly design

The clear and simple user interface of the software was very well received by employees. This user-friendliness facilitated daily interaction with the tool and promoted a positive attitude towards time tracking and project management.

**Improved reporting and transparency**

A significant advantage of the TimeStatement solution was the considerable improvement in reporting. The simplicity of the software motivated employees to fully record all relevant information. This led to increased transparency in reporting, allowing management to gain insights into profitability and other key indicators.

These benefits show that the implementation of TimeStatement not only improved process efficiency but also became a valuable resource for the entire management to make more informed decisions.
